

Proper Storage of All-States Adhesive Mounts

All-States adhesive products should be stored according to the following guideline:

Rubber and acrylic foam tape adhesive mounts should be stored at temperatures of 70F and 45% R.H.

Storage in opened containers is not recommended. **Using the recommended guideline, the average shelf life of rubber or acrylic foam tape is two years.**

Storage conditions that are different than the recommended guideline may reduce the shelf life or adhesive strength of the mount. Storage near heat sources may reduce the shelf life, while storage at lower temperatures than recommended may increase the shelf life.
